

Anir Mouse

A vertical ergonomic mouse

Fewer wrist and hand issues with a high-quality ergonomic mouse.

The Anir Mouse is a vertical mouse. When holding it, your hand and wrist are in a natural position.

When using a "standard" mouse, your wrists and hands have to bend more, which may result in discomfort or pain. When using this mouse, your wrist does not have to bend as much.

The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013).

Ergonomic: the Anir Mouse results in a good wrist posture and reduced muscle tension in your fingers and lower arm.

Reduces muscle strain: keeping arms and shoulders in a relaxed position.

Useful: an extra button for scrolling.

Perfect fit: there are several versions for different hand sizes.

Wireless: available in both Large and Medium/Small.

Connection: USB and PS2 (Cable length:200 cm).

Width	115 mm
Height	115 mm
Depth	80 mm
Weight	160 gr
Product code	Multiple versions
