

UltraBoard 960 Standard Compact

UltraBoard 960 Standard Compact

The UltraBoard 960 is a compact keyboard with a numerical keypad.

The main difference compared to a standard keyboard is the optimal layout, which makes the UltraBoard 960's design eight centimeters narrower than a "normal" keyboard!

The distance between the keys ranges from 18 to 20 mm (ISO 9241). The alphabetical section must be clearly separated from the function keys (ISO 9241). Dark letters on a clear background are easier to read (ISO 9241) and contribute to an increased productivity (Snyder, 1990). The middle row of keys cannot be elevated more than 30 mm above the surface of the desk (DIN 2137). The keyboard must be tiltable and separate from the screen (Council Directive 90/270/EEC).

A standard compact keyboard that provides the right ergonomic posture

The UltraBoard 960 Standard Compact reduces the distance to your mouse, which limits the strain on your lower arms. As an added advantage, this compact version is easier to take with you in a backpack or laptop case. This lets you work in a comfortable and ergonomically sound manner anywhere and anytime.

Advantages of the UltraBoard 960

Multifunctional

The UltraBoard 960 is ideal for employees who are used to having a numerical keypad on their keyboard and those with a permanent workstation who want to create more space on their desk.

Compact

The main difference compared to a standard keyboard is the optimal layout, which makes the UltraBoard 960's design eight centimetres narrower than a "normal" keyboard!

Keystroke

The keys of the UltraBoard 960 offer a light keystroke thanks to the application of a scissors mechanism rather than a traditional membrane system. The result is a very comfortable tactile feedback.

Concave keys

The surface of the keys is designed to automatically guide your fingers to their centre, which makes typing easier.

Light key colour

The dark letters on a light background make the keys easier to read and help increase your productivity.

2 USB ports

The UltraBoard 960 features two handy USB ports, so you will always have enough connectivity options to choose from

Knowledge Center

Research by Microsoft shows that an active computer user covers 32 km with his or her fingers daily. Therefore, the keyboard is an important part of the computer. This means that choosing the right keyboard is vital.

A compact keyboard ensures that the user adopts a good ergonomic...
